

C. *mecA* + ACME cassette + flanking regions

Functional module (number = diagonal block outline)

- |                                                   |                                                      |
|---------------------------------------------------|------------------------------------------------------|
| <b>1.</b> cell wall homeostasis                   | <b>6.</b> nickel/oligopeptide ABC transporter (ACME) |
| <b>2.</b> HVR+mecA (mecA cassette)                | <b>7.</b> copper resistance (ACME)                   |
| <b>3.</b> cassette replication (mecA cassette)    | <b>8.</b> sulfide response                           |
| <b>4.</b> putative defense module (mecA cassette) | <b>9.</b> sulfide response (split sqr gene)          |
| <b>5.</b> arginine catabolism (ACME)              | <b>10.</b> putative detoxification module            |
